MOTOROLA

DUAL 1-OF-4 DECODER/ DEMULTIPLEXER

SN54/74LS155
SN54/74LS156

The SN54/74LS155 and SN54/74LS156 are high speed Dual 1-of-4 Decoder/Demultiplexers. These devices have two decoders with common 2-bit Address inputs and separate gated Enable inputs. Decoder "a" has an Enable gate with one active HIGH and one active LOW input. Decoder "b" has two active LOW Enable inputs. If the Enable functions are satisfied, one output of each decoder will be LOW as selected by the address inputs. The LS156 has open collector outputs for wired-OR (DOT-AND) decoding and function generator applications.

The LS155 and LS156 are fabricated with the Schottky barrier diode process for high speed and are completely compatible with all Motorola TTL families.

- Schottky Process for High Speed
- Multifunction Capability
- Common Address Inputs
- True or Complement Data Demultiplexing
- Input Clamp Diodes Limit High Speed Termination Effects
- ESD > 3500 Volts

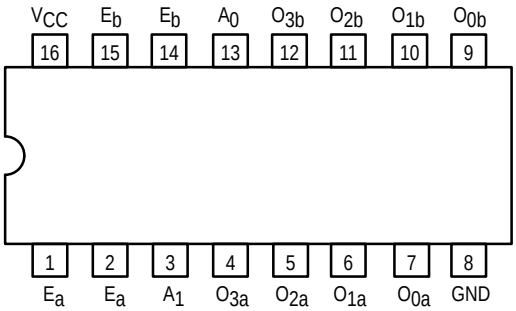
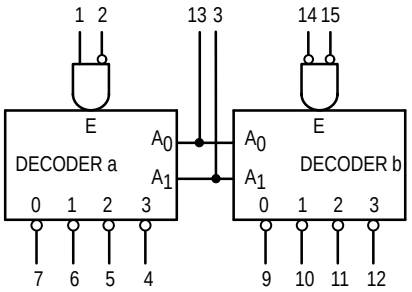
CONNECTION DIAGRAM DIP (TOP VIEW)



NOTE:
The Flatpak version has the same pinouts (Connection Diagram) as the Dual In-Line Package.

LOGIC SYMBOL



VCC = PIN 16
GND = PIN 8

PIN NAMES

		LOADING (Note a) HIGH	LOW
$\underline{A}_0$, $\underline{A}_1$	Address Inputs	0.5 U.L.	0.25 U.L.
E_a, E_b	Enable (Active LOW) Inputs	0.5 U.L.	0.25 U.L.
$\underline{E}_a$	Enable (Active HIGH) Input	0.5 U.L.	0.25 U.L.
$O_0 - O_3$	Active LOW Outputs (Note b)	10 U.L.	5 (2.5) U.L.

NOTES:
a) 1 TTL Unit Load (U.L.) = 40 μA HIGH/1.6 mA LOW.
b) The Output LOW drive factor is 2.5 U.L. for Military (54) and 5 U.L. for Commercial (74) Temperature Ranges. The HIGH level drive for the LS156 must be established by an external resistor.

FUNCTIONAL DESCRIPTION

The LS155 and LS156 are Dual 1-of-4 Decoder/Demultiplexers with common Address inputs and separate gated Enable inputs. When enabled, each decoder section accepts the binary weighted Address inputs (A_0, A_1) and provides four mutually exclusive active LOW outputs ($O_0 - O_3$). If the Enable requirements of each decoder are not met, all outputs of that decoder are HIGH.

Each decoder section has a 2-input enable gate. The enable gate for Decoder "a" requires one active HIGH input and one active LOW input ($E_a \bullet \overline{E}_a$). In demultiplexing applications, Decoder "a" can accept either true or complemented data by using the E_a or $\overline{E}_a$ inputs respectively. The enable gate for Decoder "b" requires two active LOW inputs ($\overline{E}_b \bullet \overline{E}_b$). The LS155 or LS156 can be used as a 1-of-8 Decoder/Demultiplexer by tying E_a to $\overline{E}_b$ and relabeling the common connection as (A_2). The other $\overline{E}_b$ and $\overline{E}_a$ are connected together to form the common enable.

The LS155 and LS156 can be used to generate all four minterms of two variables. These four minterms are useful in some applications replacing multiple gate functions as shown in Fig. a. The LS156 has the further advantage of being able to AND the minterm functions by tying outputs together. Any number of terms can be wired-AND as shown below.

$$f = (E + A_0 + A_1) \cdot (E + \overline{A}_0 + A_1) \cdot (E + A_0 + \overline{A}_1) \cdot (E + A_0 + A_1)$$

where $E = E_a + \overline{E}_a$; $E = \overline{E}_b + E_b$
